

Professional Audio/Visual Telecommunications Equipment and Services Solutions – Updated to Meet Your Needs

Get the Latest Technology in Professional Communications Equipment and Ancillary Services, and Meet Your Agency's Sustainability Goals through GSA's Multiple Award Schedules (MAS).

GSA offers a wide variety of audio, video and telecommunications equipment and services through GSA MAS contractors. From simple items like handheld transmitter/receivers to complex radar and infrared tracking systems, GSA contractors offer state-of-the-art options to meet your agency's specific requirements, such as:

- Complete telecommunication systems and support services including transmitter/receivers, radar, infrared, thermal imaging and sonar equipment;
- Complete audio and video recording systems (analog and digital) as well as separate components of those systems;
- Video projection components, including digital and LCD projectors, video and LED walls, rear projection display screens and video projection control modules;
- Complete listing of special effects generators including time and date stamping, picture-in-picture, closed captioning, text addition and audio voice over equipment;
- Accessories such as amplifiers, mixers, switchers, synchronizing components, editing equipment, cables, batteries and sound booths; and
- A full range of support services and accessories to design, install and maintain all types of audio, video and telecommunications systems.

What's New

All Televisions, Video Players (VCRs, VCPs, DVD and Blu-ray) and Combinations on MAS 58 I are Now ENERGY STAR® Qualified

ENERGY STAR, a joint program of the U.S. Environmental Protection Agency and Department of Energy, helps Americans save money and protect the environment through energy-efficient products and practices. GSA's Integrated Workplace Acquisition Center (IWAC) has updated MAS 58 I to ensure that all current and future products available under Special Item Numbers (SINs) 2193 and 4 and 2199-11 are ENERGY STAR qualified. This will help government agencies identify products that are more energy-efficient, assisting them in reaching their green procurement goals and complying with Executive Order 13514 (Federal Leadership in Environmental, Energy, and Economic Performance).

Blu-ray Technology Now Available

We've expanded our list of offerings to include Blu-ray technology. Touted as the next evolution in digital sound and video, Blu-ray technology is now available to government agencies through GSA's MAS 58 I. With their high storage capacity, Blu-ray discs can hold and play back large quantities of high-definition video and audio, as well as photos, data and other digital content. This optical disc storage medium advances the industry, and is expected to supersede the DVD format as the next standard. Blu-ray is now offered through MAS 58 I under SINs 2199 and 10.

What's New *continued*

Maximum Order Thresholds Revised

Several Maximum Order Thresholds (MOTs) are revised under Schedule 58 I. The revisions were made to provide adequate price protection to federal agencies procuring products and ancillary services under SINs 58 1-7 and 58 10. These changes will help ensure federal agencies will receive the commercial customer base discounts and prevent contractors from routinely exceeding the MOT with a commercial order quantity of one or two.

Professional Audio/Video, Telemetry/Tracking, Recording/Reproducing and Signal Data Solutions – MAS 58 I
